

VISIGN

The design initiative from Viega #1

New perspectives create new freedom. Visign actuating panels from Viega.

Viega bathtub fittings. This is where ambition reflects requirement.

A feat of engineering at your feet: floor level shower channels from Viega.

It's the finer details that make a bathroom perfect.

Design that keeps its promises

Nothing influences people more than their first impression. In Viega Visign's case, it is also the right impression. Feel free to believe your eyes when you see the product for the first time. Trust your feelings when you touch the product for the first time. Behind the flawless exterior is the equally well functioning technology which is at least as good as it looks.

Of course, actuating panels, bathtub inlets, siphons or shower channels are highly pragmatic objects. Their constant function means that we need not forgo anything in the bathroom. Most of all comfort. But can't these details be something more than emotionless functional products? We believe they can be. That is why we have designed a product range together with renowned designers that not only impresses due to its excellent technology, but also due to its fascinating design: Viega Visign.

Form and function perfectly united

Designer Achim Pohl from "Artefakt Industriekultur" explains it like this: "Especially the interfaces between people and technology form the character of the modern bathroom. Here, people directly experience technology. Emphasis is on details. This is where the combination of form, material and function culminate in an emotional experience. We have consciously combined the clear, minimalist forms of modern architecture with natural materials such as metal and glass, to be able to create something independent: high-quality products with a visionary look. Products that one does not have to touch, but simply wants to touch. Products that are solid, yet appear as if they are floating in front of a wall. Products to stir the emotions quite apart from their technical perfection."

Achim Pohl,
Artefakt Industriekultur

New perspectives create more freedom.

The actuation of the new Visign for More sensitive is entirely without contact: a gentle glide of the hand suffices to actuate the flush in either small or large flush volumes.

Choose the actuating panel and other functional elements to complete your bathroom concept – matching up with tiles, fittings and other sanitary objects.

**Impressive design, perfect technology,
high-quality materials**

They are so flat that it's hard to believe how much technology is actually in use. Visign actuating panels with reduced shapes and high-quality materials such as chrome, stainless steel and refined, toughened safety glass prove that restraint is in fact an adornment. With Visign for More, the aesthetic range for linear architecture, a wide selection of materials and colours are as much a piece of the series as the modern rocker technology. You think that this perfection is admirable? Then you are of the same opinion as many design juries. They have awarded Visign actuating panels many prizes.

Touchless comfort: Visign for More sensitive

The new Visign for More sensitive represents progress. It combines for the first time the preference of an electronically actuated flush with the aesthetic of prize-winning designs. No fingerprints, no hygiene risks, but instead an absolutely flat, easily maintainable surface – a gentle glide of the hand suffices to actuate one of the two flush volumes. Fascinating comfort that you can only obtain from Viega.

The freedom to decide for oneself

There is no accounting for taste, but quality is another matter. That is why Visign actuators give you the freedom to decide how your bathroom will look, right down to the smallest detail. Whichever material in whichever colour or shape you choose, the technology is able to fulfil your wishes. Especially when it concerns designing the complete architecture of a bathroom in unmistakable style. The reason: the benefits of Viega pre-wall technology systems are hidden behind every Visign actuator panel, whose versatility knows no boundaries.

Viega pre-wall technology. New space for your ideas.

Individual bathroom design options

Rooms are there to be designed. That is the reason why Viega pre-wall systems allow sanitary objects to be placed as you wish. You would like a free-standing room partition, a crescent wall or barrier-free bathroom planning? Using Viega pre-wall systems, your ideas can be realised with millimetre precision and to highest standards of product quality. For a bathroom that expresses your own individual taste using space and design.

A close-up photograph of a polished metal bathtub fitting, likely a Viega brand, set against a dark, textured stone wall. The fitting is on the left side of the frame, showing a curved, reflective surface. The stone wall is composed of irregular, dark grey or black stones with visible mortar joints. The lighting is dramatic, highlighting the metallic sheen of the fitting and the rough texture of the stone.

Viega bathtub fittings.
This is where ambition reflects requirement.

Design is also a question of reduction:
the Visign bathtub fittings.

Best of Design

Visign bathtub fitting are at home in every type of bathroom architecture because of their high-quality and timeless design and are also hardly noticeable in the bathtub because of their minimal construction height. This offers unimaginable comfort; you therefore avoid protruding objects in the bathtub. Even though they are quite discreet, they still get noticed. Mostly in design competitions. No fewer than four fittings were presented with the coveted reddot design award. The Visign MT3 also won the honour "best of the best".

Three-in-one – Visign bathroom fitting sets with inlet function

Modern designer bathrooms distinguish themselves by concentrating on the essentials. Graphic shapes, clear structures. Cool materials, clever ideas. Everything that serves the purpose of aesthetics is left out – the bathside fitting is just one example. Instead, multi-functional fittings, which serve the purpose of inlet, outlet and overflow, are brought into use. The reduced design of the extremely flat Visign bathtub fittings cleverly disguises the level of technology it has to offer. The fittings with inlet function fill a bathtub in a few minutes with a quiet, straight-lined waterfall that even the designer could not have created any better.

A high-angle, close-up photograph of a white, rectangular shower tray. Two circular, dark grey drains are visible on the tray's surface. The tray is set against a background of large, square, light grey tiles. In the upper left corner, a portion of a woven basket and a small white object are visible. The lighting is soft, creating subtle reflections on the tray's surface.

Enjoy the shower experience:
Viega shower tray drains.

Wellness within your own four walls

Modern technology has transformed bathrooms into wellness oases. Comfortable waterfall showers and XXL-shower heads have made showering into an experience and let the water trickle down the skin like summer rain. Refreshing for the body; a challenge for technology. That's because the shower drain has to work at full capacity to deal with the resulting volumes of water.

The right technology for every tub

If you decide in favour of a lower shower tray, Viega's shower tray drains for large volumes of water – like those which are produced by rain shower heads – are an excellent choice. Or should you on the other hand prefer a higher shower tray, we are also able to provide the necessary fittings. Practical details such as the optional hair sieve or the removable odour trap ensure easy cleaning.

Turn the shower into a bathtub:

Duoplex

The Duoplex fitting is especially suitable for family bathrooms. It has an extricable standpipe which allows water to be held in the tub up to a depth of 90 mm. This makes it possible for children to bathe comfortably in the shower tray.

Looking down is worth it: Viega Eleganta siphons.

Step beyond elegance: Visign washstand siphons

These days, innovative technology has no reason to hide itself away. Eleganta siphons are regarded as a self-confident statement which unmistakably enriches the overall impression of each and every washstand. The siphons connect excellent quality with impressive technology and design requirements. As Eleganta 1 they captivate with stylish straight lines, as Eleganta 2 they play with the pleasing conical form, as Eleganta 3 they concentrate on the organic curves. In every case, due to their large range of models, they offer unlimited freedom when designing sophisticated bathrooms.

Chic with Click

Visign siphons can be combined perfectly with suitable universal or stem valves. The valves are available with or without overflow function, in round or square form. In this way, they underline the individual style of modern washstands. Additionally, the valves are optionally equipped with refined click-technology. This makes it possible to close the drain with a light touch of the finger, and to open it in the same way. This comfortable technology makes unsightly pull rods on fittings superfluous.

Quality, all the way down the line

Gone are the days when shower trays determine the shape and position of the shower area. The multiple design prize-winning Visign shower channels offer you new freedom when creating a new bathroom concept. With equally high quality as well as unusual materials, e.g. glass, the channels are far more than just a boundary between wet and dry zones. They are an optical highlight, which provide reliability with safety relevant characteristics, when large volumes of water are to be dealt with.

Due to their variable construction height of 90 – 150 mm, Visign shower channels from Viega are especially suitable for renovation and improvement work.

Visign shower channels.
The best foundation for floor level showers.

Your taste decides

Architecture needs freedom. That is why Visign shower channels can be used exactly where the building concept requires them to be. Should the shower channel be in the middle of the room to optically separate the dry and wet zone from one another? Or do you prefer to position it along a wall? With Visign shower channels, taste and architecture decide on the positioning. The same is true for the choice of materials. Polished and matt-finished stainless steel is available as well as purist glass. A special highlight: a shower channel that you can work into the tiles around the bathing area – tailor-made to your individual taste.

Tailor-made safety

No matter which of the nine different designs you opt for, Visign shower channels always convince with a high level of reliability. They promise a feeling of safety in every way. Special assembly processes and sealing materials of the highest quality guarantee that no dampness gets into the floor. As you can see, the designers thought of everything when designing the Visign shower channel system – even a removable dirt trap and a fully accessible base plate for easy cleaning.

They are round, they are square, they are triangular and they offer designs to satisfy individual tastes. The attractive grates of the Visign range from Viega are another elegant solution for designing floor level showers alongside the shower channels. They are offered with various perforations and therefore set different moods. All of the models are made of solid stainless steel and combine sophisticated aesthetics with high stable value. Thanks to the 5 mm thick stainless steel, they are particularly resistant to strong cleaning products and heavy loads. Some grates captivate with a material mixture consisting of glass and metal – a combination that has not only seen it earn admiring looks, but in fact international design prizes as well.

Discretion is the word – the corner drains

Visign grates as corner drains are outside of the normal walking area and create a harmonic unit with the respective shower screen, as they are available as quarter circles in the classical triangular form.

An all-round winner – organically formed grates

For bathrooms which feature rolling contours and shapes, there are now round Visign grates. Due to their shape, they are the optimal solution for mosaics or sandstone.

Edgy style without cutting corners – square grates

The square Visign grates are absolutely perfect for bathrooms with linear architecture and can be integrated optimally into the tiled floor. The materials from which you can choose are always impressive with excellent optic appeal.
